**Sensitivities SPP guaranteed portfolio**

The sensitivities shown below are based on internal risk modeling. The sensitivities are a point in time estimate on the risk associated with market movements in the disclosed markets factors. Important assumptions behind the sensitivities are amongst others instantaneous change in the disclosed market factors and change in one market factor at a time.

The financial result may vary significantly from what the sensitivities indicate throughout a period based on amongst others: management action based on market movements throughout the period, several market factors moving simultaneously and indexes not giving a precise approximation of actual investment portfolio. For example the credit portfolio is constructed to be robust versus the liabilities and has a low correlation to ITRAXX.
